HTML Forms

What is form
it is structure to collect user input.

Basic tags which are used in forms

Tags -

`<form>` → to create HTML forms
for user input

`<input>` → many kinds of forms

- male female.
- Hindi English
- calendar

<Label>

login id

[]

→ correct Label

→ Screen Reader - like type password
gmail, etc.

for = " ")

→ ye value input ki id = " "

ke barebare value honi chahiye

Because we have to link.

Body

<form> type

<input for = " " >

<label for="EmailId" id="LoginId" > Login id
same </label>

<input type="text" id=" " > Logi <<>>

<label for="Pas" > Password (16
char)

<input type="password" id="Pas" >

<input type="submit" value="click" >

</form>

`<input type="text" id="Name">`

unique

Enter Name → → `type="text"`

Male Female Other → `type="radio"`

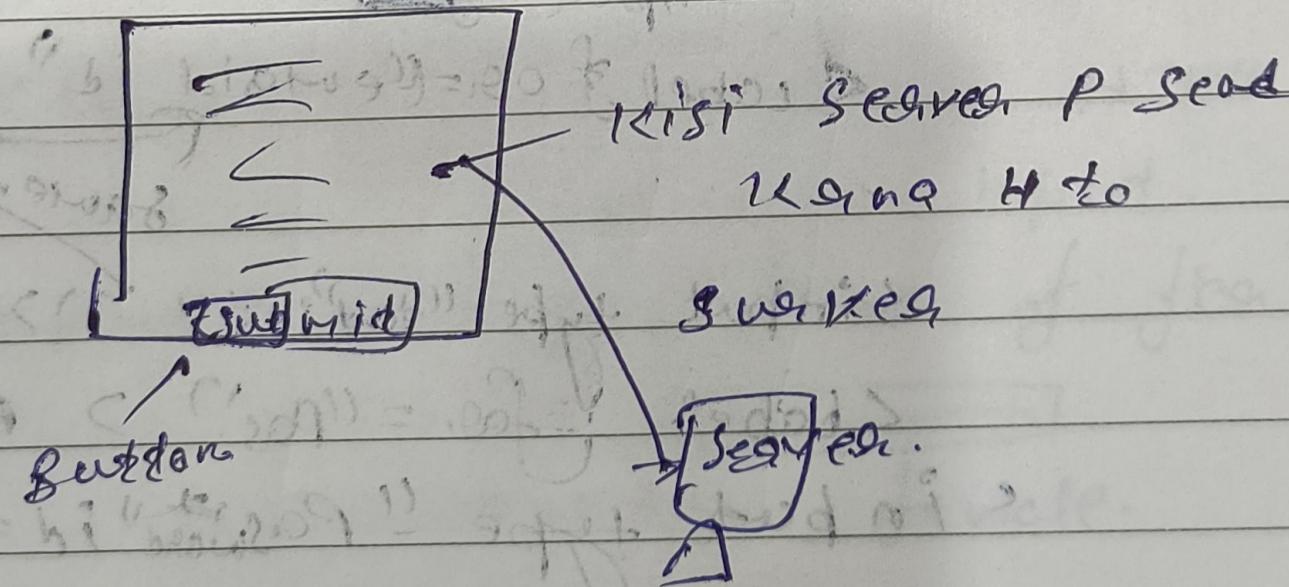

English Hindi → `type="checkbox"`

→ `type="date"`

`input` → `for`

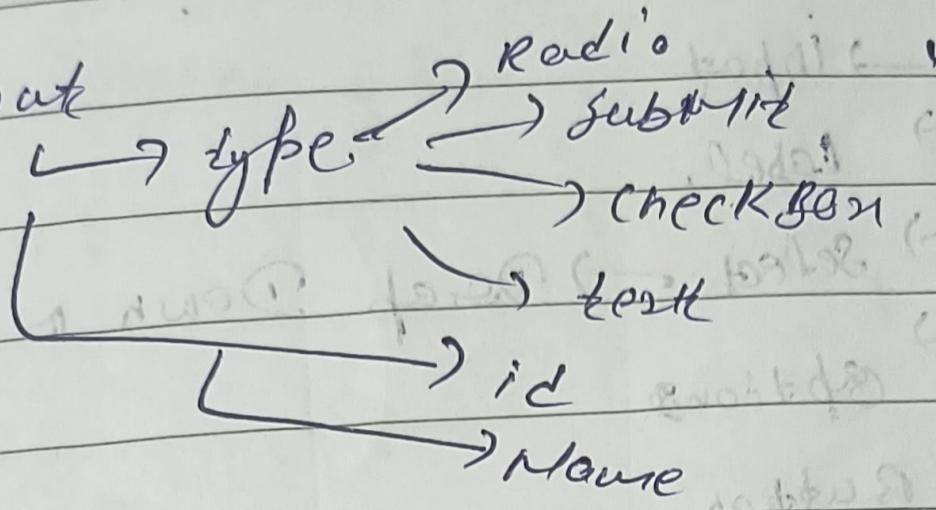

`input` → `id` → should same

`<input type="submit">`

→ form

→ input

→ label

→ for

<input type="text" value="Manu" />

Manu

already in the form.

<input type="submit" value="click" />

click

username

password

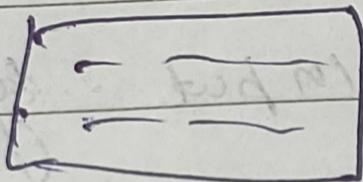

added text for g.

Placeholder

placeholder

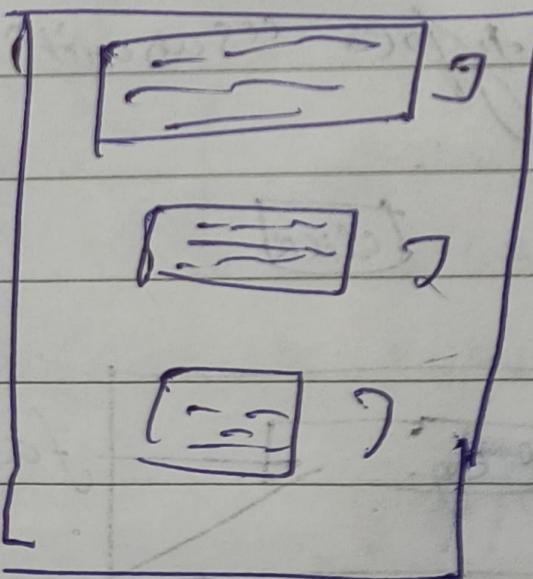

form element

- ↳ input
- ↳ label.
- ↳ select → Drop Down menus
- ↳ Options
- ↳ Button
- ↳ textarea.

↳ fieldset

↳ legend

fields.
avale
of male
other

Caption → Legend.

Row

calcuations in tentarea - we can handle

size of it

<form>

<input type="Date" id=" " value=" " />

<select name="dishes" id=" " >

<option value=" " > -- </option>

B </selected>

<Buttons> certain chosen button X/Buttons

<textarea name="math" id=" " Row="1" col="1" Placeholder=" " >

<textarea>

W/W in Selected options

① Select multiple items

Referring to
multiple selection
for usage
of multiple
input types

Input types

<input>

→ textfield

→ button

→ radio

→ checkbox

→ file upload

→ image

→ password field

→ Date

etc

suggestions

By Default input type is text.

① Text field

```
<form> <label> <input type="text" />
```

② Submit button

<form>

```
<input type="submit" name=" " id=" " value=" " />
```

for display Name

on Button

- ③ To choose one Radio button
- <input type="radio" id="1" name="b1">
- <input type="radio" id="2" name="b1">
- <input type="radio" id="3" name="b1">
- If name is in name. Only if same.
Then we can select
one ~~opt~~ radio button
otherwise name is different
we can't select multiple
- for checkbox
- > type="checkbox"

④ file select

`type = "file"`

⑤ image

make button as image

`input type = "button" name = "submit"
id = "img" src = "imgurl" width = "100" height = "100"`

⑥ `input type = "password" name = "password"`

⑦ `input type = "date"`
